## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Joseph Kolodka on 13 January 2005.

The application has been amended as follows:

#### **Claim 1:**

Lines 10-11, the statement "one such row pair for each handset," has been deleted; and

line 12, the statement "the respective handset" has been changed to -- a respective handset—

#### **Claim 9:**

Lines 15-16, the statement "one such row pair for each handset," has been deleted; and

line 17, after "time slot for" the statement -- a respective handset and a plurality of transmit and receive audio packet time slots for— has been inserted.

#### **Claim 11:**

Lines 12-13, the statement "one such row pair for each handset," has been deleted; and

line 14, the statement "the respective handset" has been changed to -- a respective handset—

***Allowable Subject Matter***

Claims 1-14 are allowed.

The following is an examiner's statement of reasons for allowance:

Kim, US Patent No. 6,172,971, discloses a method for forming frame structure for use in time division multiple access (TDMA) communication system. Kim does not teach or fairly suggest the following features, which are recited in each independent claim of the present application:

(i) A wireless telephone system, comprising:

(a) a base unit having a base transceiver; and

(b) a plurality of wireless handsets, each handset comprising a handset transceiver for establishing with the base unit via the base transceiver a time-division multiple access (TDMA) data link and a TDMA audio link, in accordance with a TDMA epoch allocating exclusive data and audio packet time slots to each handset, wherein the data link is for transmitting signaling information and the audio link is for transmitting voice data for a real-time telephone call, wherein

the base unit, upon request from a handset for data from a data source, retrieves the requested data from the data source and transmits the retrieved data to the handset via the audio link, wherein:

the epoch has a plurality of transmit and receive data row pairs, wherein each row pair comprises

an even row comprising a transmit data time slot for a respective handset and a plurality of transmit and receive audio packet time slots for a portion of the maximum number of the plurality of handsets which may be communicating at a time, and an odd row comprising a receive data time slot for the respective handset and a plurality of transmit and receive audio packet time slots for the other portion of the maximum number of the plurality of handsets which may be communicating at a time; and

each handset receives and transmits data packets via the receive and transmit data packet slots only once during each epoch, during the transmit and receive data row pair for each said handset, and, if the handset is communicating with the base unit, each handset receives and transmits audio packets during respective transmit and receive audio packet time slots of each row pair of the epoch as recited in claims 1, 9 and 11.

(ii) A wireless telephone system, comprising:

(a) a base unit having a base transceiver; and

(b) a plurality of wireless handsets, each handset comprising a handset transceiver for establishing a data link and an audio link with the base unit via the base transceiver, wherein the data link is for transmitting signaling information and the audio link is for transmitting voice data for a real-time telephone call, wherein the base unit, upon request from a handset for non-voice data from a data source, retrieves the requested data from the data source and transmits the retrieved data to the handset via the audio link if the handset is not currently using the audio link to transmit real-time

telephone conference voice data and transmits the stored information to the handset via the data link otherwise as retied in claim 13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **Conclusion**
